ABSTRACT

To help encourage deeper exploration and the development of collaborative data science innovations, the WiDS Datathon Committee and the National Science Foundation Big Data Innovation Hubs are hosting a second phase of the WiDS Datathon this year — with a new WiDS Datathon Excellence in Research Award. We invite you to share more details about your work with WiDS Datathon 2020 data through a one-page research paper. Submissions should also include an abstract (4-5 sentence summary) and a list of references (e.g., cited research papers, books, tutorials, or other resources used). This sample document is provided as an example template.

KEYWORDS

Insert keyword text, Insert keyword text, Insert keyword text, Insert keyword text
1 Insert Heading Level 1

Submissions will be reviewed by subject matter experts from the WiDS Datathon Committee, the National Science Foundation Big Data Innovation Hubs, and the MIT GOSSIS community. Papers will be evaluated on their potential for real-world impact, rigor in scientific methodology, and clarity of communication.

We request submission content in English to facilitate the review process, but welcome additional translations and encourage participants to share their papers broadly. Papers will also be eligible to be published on the WiDS Datathon website.

Papers should address questions including but not limited to:

- What assumptions did you make in preparing your models and analyzing the data?
- What are the potential implications of your assumptions?
- What are your main insights and contributions?
- What are some of your 'lessons learned' and meaningful or surprising results?
- What unanswered questions do you have about the data, your analysis, and the analysis from the research community?
- How might you and others address these unanswered questions and/or advance related research?
- Are there open problems in mathematics, statistics, computer science, applied medical research or related fields that could benefit from deeper exploration of this data set?
